

Ampere

Your Assignment:

1) Write the dictionary's description of Ampere?

2) What device is used by electrical workers, engineers and scientists to measure Amps in electrical circuits?

3) Make a simple circuit, demonstrating the current used to make a light glow or a motor to run or you could think of something else to test. You will need an Ammeter or a multi-meter (a multi-meter has a built-in Ammeter), insulated wires, your chosen device should use a 12v or 6v battery. This project will demonstrate the current used by the device.
